What is that feeling ?

What is that **feeling** ?

“.Developing a Scale to Measure **Perceived Personal Safety**
Fostered by Technology during Door-to-Door Transportation.”

“An individual’s subjective assessment and emotional response regarding their safety, uniquely shaped by personal experiences and context”

- how you evaluate your safety
- varies from person to person

*“An individual’s **subjective assessment** and emotional response regarding their safety, uniquely shaped by personal experiences and context”*

- not just logical evaluations
- how you feel about your safety

*“An individual’s subjective assessment and **emotional response** regarding their safety, uniquely shaped by personal experiences and context”*

*“An individual’s subjective assessment and emotional response regarding their safety, **uniquely shaped by personal experiences and context**”*

- 
- influenced by unique life experiences and the specific contexts you find yourself in

So many technologies, but are they effective ?

Tourist Perceived Safety at Destinations- TPSD ^[1]

Work Safety Scale (WSS) ^[2]

School Climate Survey and the
Neighborhood Inventory for Environmental
Typology (NIfETy) ^[3]

Multidimensional Model of Perceived
Personal Safety (PS)_[4]

Personal safety ?

Transportation ?

Technology ?

None of these scales can measure
these technologies' effectiveness

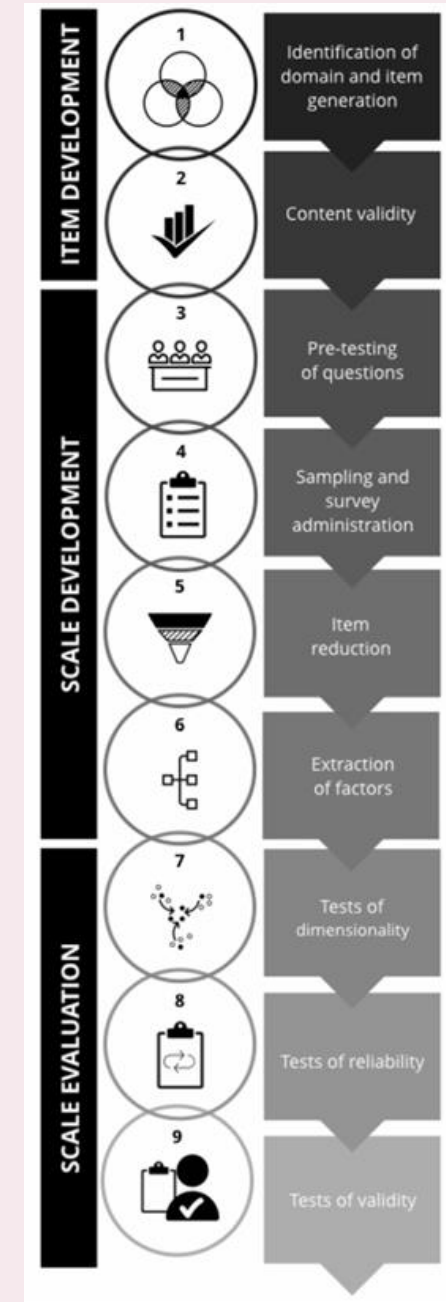

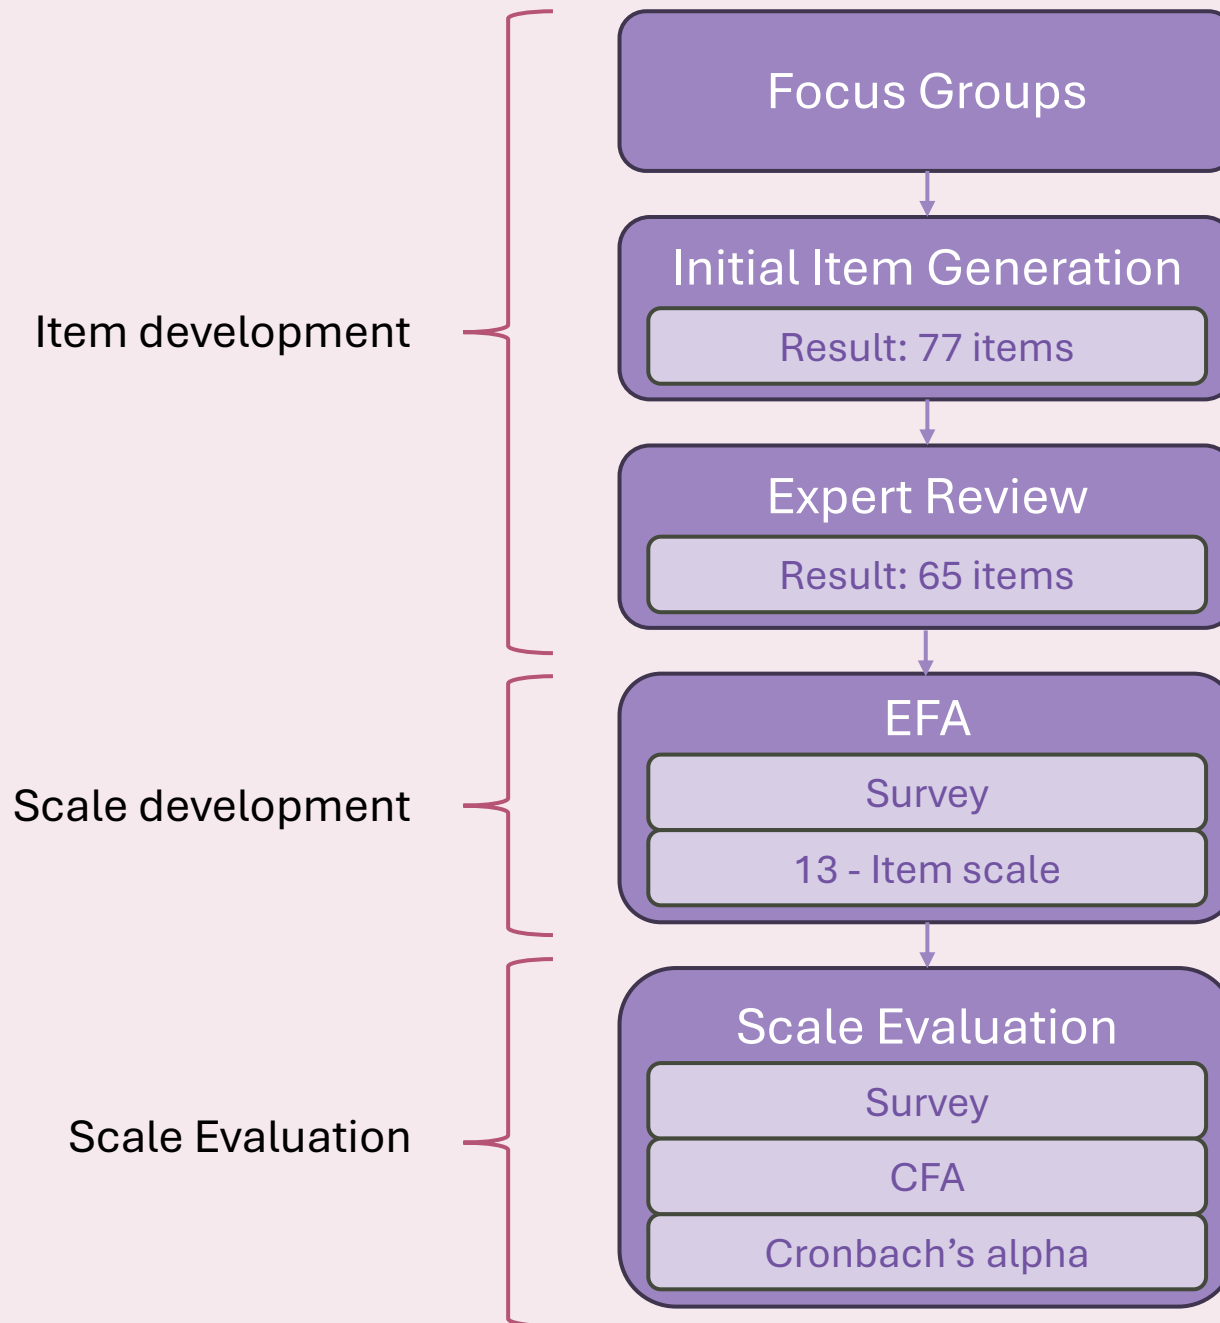

“What is a reliable scale to measure perceived personal safety fostered through technology during door-to-door transportation?”

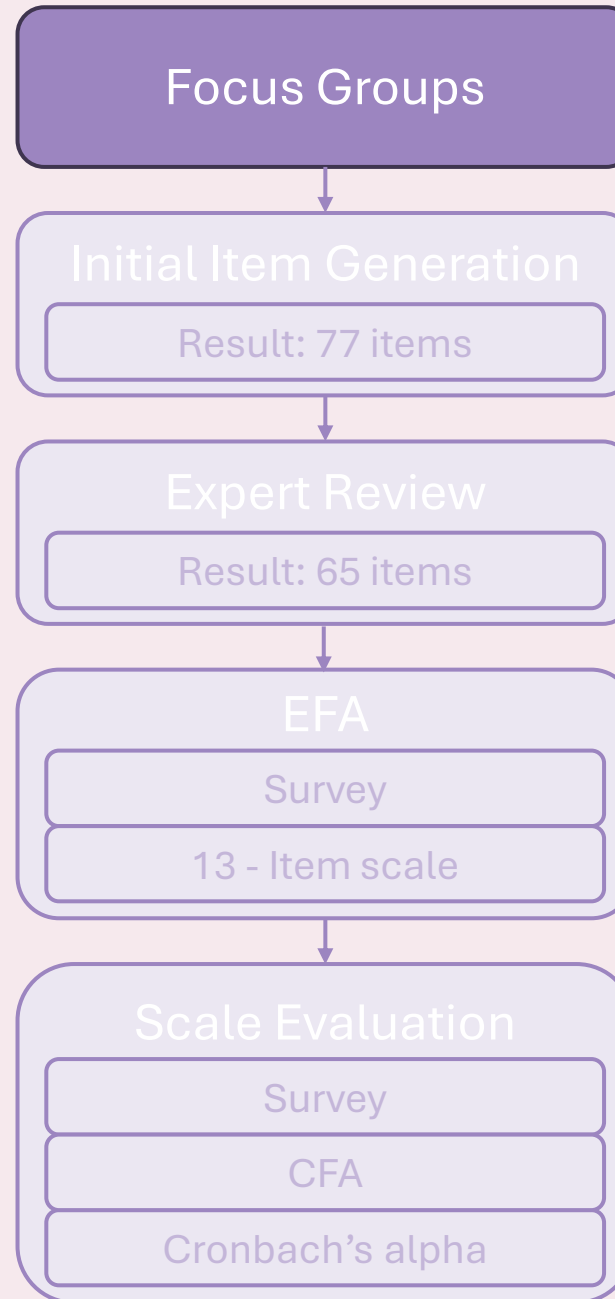

*“What is a **reliable scale** to measure **perceived personal safety** fostered through technology during **door-to-door transportation**?”*

How did we answer the RQ?

Three phases and nine steps of scale development and validation [5]

What are the factors that affect PPS during DTD?

Using this technology helps me feel less anxious when walking alone

Using this technology helps me feel more prepared when transitioning from public transportation to walking

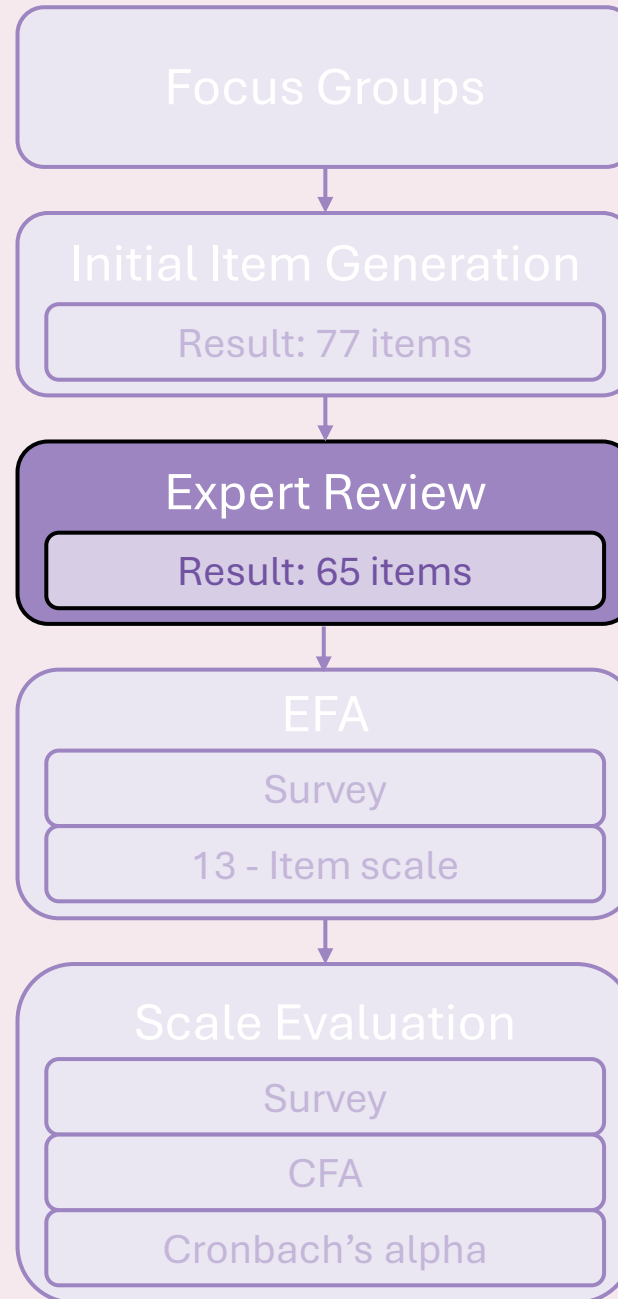

Using this technology helps me balance my perception of risk of gender-based violence, without feeling overwhelmed by concerns while traveling

Using this technology helps me feel more comfortable around strange people

Using this technology helps me reduce my fear of hate crimes when I express my individuality while I travel

Using this technology helps me reduce my discomfort in diverse social settings where my ethnic or racial identity might be more noticeable while traveling

4 factors

Loadings > 0.75

Identity

1. Using this technology helps me ease my concerns about standing out due to my appearance or presentation in areas with different religious or cultural norms
2. Using this technology helps me reduce my discomfort in diverse social settings where my ethnic or racial identity might be more noticeable while traveling
3. Using this technology helps me reduce my fear of hate crime when I express my individuality while traveling
4. Using this technology helps me feel less worried about prejudice based on how I express myself
5. Using this technology helps me maintain my confidence even in areas where my ethnicity is not well-represented

Traveling Alone

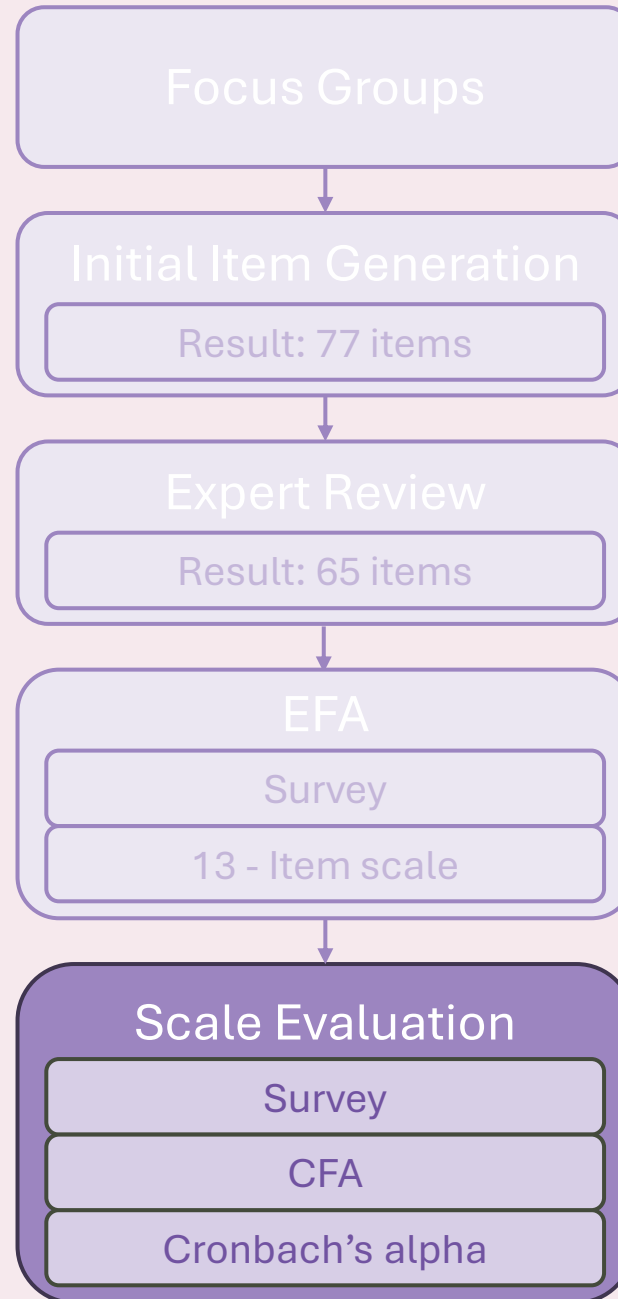

6. Using this technology helps me feel less scared when traveling alone
7. Using this technology helps me feel less anxious when walking alone
8. Using this technology makes me less anxious when walking through a station alone

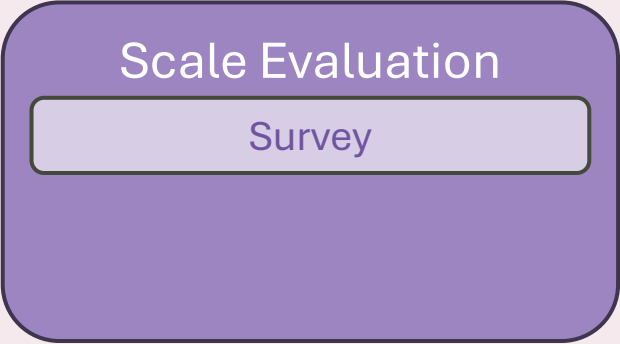

High-Risk Context

9. Using this technology helps me feel more confident while maintaining an appropriate level of caution when walking alone in a dangerous area
10. Using this technology helps me feel less scared while maintaining an appropriate level of caution when walking alone in a bad neighborhood
11. Using this technology helps me feel less nervous while staying vigilant when using public transportation or walking in an area with a bad reputation

Interactions with Strangers

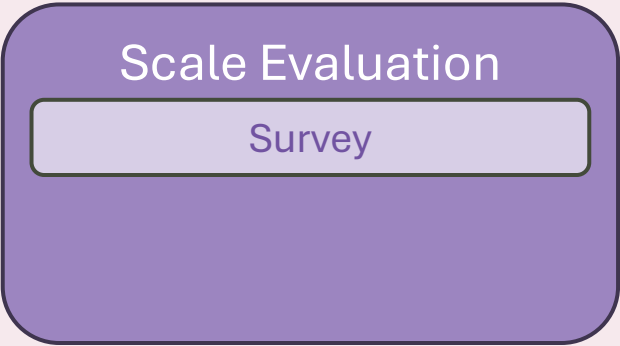

12. Using this technology helps me feel more comfortable when unwanted interactions with strangers occur
13. Using this technology helps me feel more confident when unwanted interactions with strangers occur

Implications

- Evaluation of personal safety apps
- Help identify strengths and weaknesses of features
- Promot public transport, more eco-friendly transport

Limitations

- Video-assisted showcase of the app
- Prolific: self-selected sample
- Global applicability: may miss regional variation

Future Work

- Bigger sample for evaluating the PPSS
- Construct and discriminant validity through known groups and t-tests
- Develop and test an enhanced version of the bSafe app based on PPSS feedback

Thank you for your attention :)

Questions?

Scenario #1

It's rush hour and 25-year-old Mike has to go to work. It's his first day at his new job in a brand-new city. To get to the office, Mike checked the travel planner which indicated a public transport travel time of 40 minutes in total. He leaves the house and walks 5 minutes to the train station. Arriving at the station, he walks to the platform and waits 3 minutes for the train to arrive. When the train arrives, Mike gets on the train and rides it for 20 minutes. After arriving at the station, he gets off and walks to the nearest metro station. After boarding the metro, he spends 10 minutes on it. When Mike arrives at the station, he takes a short walk towards his office on the other side of the road.

Scenario #2

Mia has just had a night out with her best friends for her 18th birthday, and they all get on the last metro to go home. They board the metro together, but since they all live in different areas of the city they have to each get off at a different station. Arriving at Mia's destination, she says goodbye to her friends and exits the metro. Then she walks through the station and gets in the direction of her place, which is a 7-minute walking distance.

Scree Plot
